Accessibility Statement

evasys and evaexam are deployed in more than 1000 institutions world-wide.

We are committed over time to making its solutions accessible in accordance with the Public Sector Bodies (Websites and Mobile Applications) (No. 2) Accessibility Regulations 2018, where this does not cause a disproportionate burden.

This document summarises the current level of compliance.

1. Online Surveys and Exams

    Since August 2012, online surveys and exams for students complied with Web Content Accessibility Guidelines (WCAG) 2.0 AA standard, certified by the independent Swiss foundation "Access for All".

    Effective from v8.0.1 released in December 2019, online surveys and exams have been compliant with WCAG 2.1 AA criteria, verified by an independent consultant.

    A Voluntary Product Accessibility Template (VPAT) Accessibility Conformance Report is available on request.

2. Instant Feedback Report

    The Instant Feedback Report is made available to academic staff following completion of the survey, providing detailed analyses of students' response; it can also be made available to students.

    Effective from v8.0.2 released in July 2020, the html version of the report is fully compliant with WCAG 2.1 AA.

    The PDF version is only partially accessible. Currently, there is no validation tool comparable to the W3C Validator available. When one is, another assessment will be made but initial indications are that full compliance may represent a disproportionate burden. Meantime, enhancements will be made over time to improve the level of accessibility. Customers seeking a compliant solution should use the html report.

3. Survey Portal for Students / Instructor and Admin Portals for Staff

    The Student Portal is WCAG 2.1 AA compliant; the Staff Portal is currently being developed to become WCAG 2.1 AA.

4. "backend" evasys

    The core EvaSys "backend" application is normally used by a limited number of "Super Users", usually based centrally. It is not currently WCAG 2.1 AA compliant. It is assessed as a disproportionate burden to comply.
